

Write a C# program to which reads a set of strings and then print the string having highest number of vowels.

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;

namespace ConsoleApp9
{
    internal class Program
    {
        static void Main(string[] args)
        {
            Console.Write("How many strings do you want to enter: ");
            int n = int.Parse(Console.ReadLine());

            string maxVowelString = "";
            int maxVowels = 0;

            for (int i = 1; i <= n; i++)
            {
                Console.Write("Enter string " + i + ": ");
                string input = Console.ReadLine();

                int vowelCount = 0;

                foreach (char c in input)
                {
                    if ("aeiouAEIOU".IndexOf(c) >= 0)
                    {
                        vowelCount++;
                    }
                }

                if (vowelCount > maxVowels)
                {
                    maxVowels = vowelCount;
                    maxVowelString = input;
                }
            }

            Console.WriteLine("\nString with most vowels: " + maxVowelString);
            Console.WriteLine("Number of vowels: " + maxVowels);
            Console.ReadKey();
        }
    }
}
```
