BCACACS 102

**First Semester B.C.A. Degree Examination, December 2025/January 2026
(SEP) (2024-25 Batch Onwards)
PROGRAMMING IN C**

Time : 3 Hours

Max. Marks : 80

Note : Answer any ten questions from Part – A and any one full question from each Unit in Part – B.

PART – A

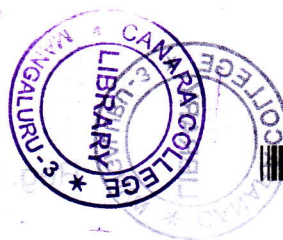

1. a) What are tokens ? Give any two examples. **(10×2=20)**
- b) Specify the value of x after evaluating following expression
 $x=5+4-2*8/3\%10;$
- c) List and specify the meaning of any four backslash character constants.
- d) What are operators ? Specify their use.
- e) List the rules for evaluation of Expression.
- f) Give the syntax of conditional operator. Give an example.
- g) What is the difference between reading string value using scanf("%s") and gets() functions ?
- h) What are the actual and formal arguments ?
- i) Differentiate automatic and static variables.
- j) How does an append mode differ from a write mode ?
- k) What do you mean by scale factor in pointer increment ?
- l) What is Macro Substitution ? Give example.

PART – B

Unit – I

2. a) List and explain primary data types available in 'C'.
- b) With example explain the formatted output in C.
- c) List and explain the features of C. **(5+5+5)**

P.T.O.

3. a) Write a note on constants in 'C'.
b) Write the structure of C program and explain each section.
c) Explain with example #define statement in 'C'. List rules apply to it. (5+5+5)

Unit – II

4. a) Explain switch statement with syntax and example.
b) With syntax and example, explain the conditional operator.
c) Explain the concept of type conversion in C. Give example. (6+4+5)
5. a) Explain while statement with syntax and example.
b) Write a note on bitwise operators in C.
c) Write the syntax and usage of any two built-in Mathematical functions available in C with example. (5+5+5)

Unit – III

6. a) How to initialize a one-dimensional array in C ? Give an example.
b) Explain the string functions to do the following with syntax and example.
i) To copy one string to another string.
ii) To add two strings.
c) Explain with example declaring, defining and calling a function in C. (5+5+5)
7. a) With example explain function with arguments and no return value.
b) Explain any five character manipulating functions in C with syntax and example.
c) Explain with example how to declare, initialize and use strings in C. (5+5+5)

Unit – IV

8. a) What is a file ? Explain any four types of file access modes.
b) What do you mean by pointer arithmetic ? Explain how it is differed from other integer arithmetic.
c) What is structure ? How does a structure differ from an array ? (5+5+5)
9. a) Explain with example defining a structure, declaring structure variable and accessing structure members.
b) Explain how pointers are used to access string.
c) What is the purpose of the following functions ?
i) feof() ii) fopen() iii) ferror() iv) fscanf() (6+5+4)
